

SOLAR VIRTUAL PRESENTATION

Power your home. Protect your future.

A modern homeowner consultation explaining solar, batteries, financing, incentives, and why Nexis Power is the right local partner.

MA + NH homeowners

Virtual sales-ready

Nexis Power LLC

Inspired by clean proposal flows like Enerflo and Aurora — rebuilt with Nexis Power branding and sales clarity.

Today's homeowner conversation

The goal is simple: understand the bill, the system, the savings, and the next steps before making a decision.

01 Your electric bill problem

Plain-English explanation + personalized questions for the homeowner.

02 How solar works

Plain-English explanation + personalized questions for the homeowner.

03 System design & battery

Plain-English explanation + personalized questions for the homeowner.

04 Incentives + financing

Plain-English explanation + personalized questions for the homeowner.

05 Why Nexis Power

Plain-English explanation + personalized questions for the homeowner.

06 Project timeline + close

Plain-English explanation + personalized questions for the homeowner.

**Educate → Design → Review →
Decide**

Electricity has become the problem

Electricity has become the problem

New England homeowners pay some of the highest electricity prices in the country.
Solar helps reduce exposure to rising utility costs.

+150%

Massachusetts residential average
electricity price from 2004 to 2026

+112%

New Hampshire residential average
electricity price from 2004 to 2026

Homeowner takeaway

Rates can change

Utility prices move with supply costs, grid investments, storms and regulation.

Usage keeps growing

Heat pumps, EVs and home electronics make energy planning more important.

Solar creates control

Produce more of your own power instead of buying every kWh from the utility.

MA Solar Market Context

MARKET CONTEXT

Massachusetts homeowners are paying some of the highest electric

20-year price movement

MA residential average electricity prices increased significantly from 1980 to 2026.

Rep takeaway

Solar lets the homeowner replace part of an unpredictable utility bill with a more controlled energy strategy.

How to say it

"Solar gives you a way to produce power on your roof instead of buying all of it from the utility."

NH Solar Market Context

MARKET CONTEXT

Massachusetts homeowners are paying some of the highest electric

20-year price movement

NH residential average electricity prices increased significantly from 1980 to 2026.

Rep takeaway

Solar lets the homeowner replace part of an unpredictable utility bill with a more controlled energy strategy.

How to say it

"Solar gives you a way to produce power on your roof instead of buying all of it from the utility."

How Residential Solar Works

SOLAR BASICS

The simple version: sunlight becomes usable electricity

How Residential Solar Works

From sunlight to savings

Nexis solar systems capture clean energy from the sun and power your home. Any extra energy can flow to the utility grid—helping you save more through net metering.

1. Panels collect sunlight

PV modules create direct current electricity when sunlight hits the cells.

2. Inverter converts power

The inverter converts DC power into AC power that the home can use.

3. Home uses solar first

The house consumes solar power in real time before buying grid power.

4. Excess can flow to grid

Extra production can export and create credits under applicable rules.

How Residential Solar Works

SOLAR BASICS

How net metering should be explained

Solar System Components

SYSTEM COMPONENTS

Main parts of a residential solar system

MARKET CONTEXT

What solar does for the customer

Control

Solar helps homeowners reduce the amount of energy they buy from the utility. The value is strongest when the home has good sun, enough usage, and a bill structure that can be offset.

Predictability

With loan, lease, or PPA options, homeowners can often move from a variable utility-only bill to a structured monthly energy payment plus any remaining utility charges.

Home modernization

Solar pairs with batteries, EV charging, heat pumps, and future electrification. A good rep sells the customer's future energy plan, not only panels.

Resilience

Solar alone normally shuts down during an outage for safety. Battery-backed systems can provide backup power to selected circuits when designed properly.

Do not overpromise

- Do not guarantee a \$0 bill unless the proposal and utility rules support it.
- Do not quote incentives unless verified for that project.
- Do not promise outage backup unless a battery and backup configuration are included.
- Do not present tax advice. Encourage customers to consult a tax professional.

BILL TRAINING

How Massachusetts electric bills are structured

Supply charges

The cost of the electricity itself. Customers may receive supply from the utility basic service or a competitive supplier. Solar can reduce the amount of kWh the customer needs to buy.

Delivery charges

The cost to deliver power through poles, wires, substations, customer service, public benefits, and grid-related programs. Delivery charges often include both fixed and volumetric items.

Customer charge / fixed charges

A monthly account charge that often remains even if the home produces solar. This is why a "\$0 utility bill" is not always realistic.

Taxes, adjustments, and riders

Bills may include state, utility, energy-efficiency, renewable, transmission, or other adjustment line items. Reps must not guess: read the bill line by line.

Rep rule

Always ask for a full bill and 12-month usage. A one-month bill is not enough to size a system correctly because MA usage changes across seasons.

1 Account Balance

Provides a summary of your account activity.

- **Previous Balance:** The amount owed from your last bill.
- **Payment(s) Received:** Payments applied since your last bill.
- **Amount Past Due:** Any unpaid balance.
- **Current Charges:** Nine charges for this billing period.
- **Amount Due:** Total amount due by the payment due date.

2 Detail of Current Charges

Breaks down the charges for electricity delivery to your home.

- **Customer Charge:** A fixed daily charge to cover basic service costs.
- **Distribution Charge (Dist Chg):** Covers the cost of delivering electricity locally.
- **Transition Charge:** Helps cover the cost of changing from higher-priced power contracts.
- **Transmission Charge:** Pays for the regional delivery of electricity.
- **Energy Efficiency Charge:** Supports energy efficiency programs.
- **Renewable Energy Charge:** Supports renewable energy projects.
- **Net Meter Recovery Charge:** Recovers costs related to customers who send energy back to the grid.
- **Distributed Solar Charge:** Helps support local solar programs and infrastructure.
- **Electric Vehicle Charge:** Funds programs that support electric vehicles and charging infrastructure.

3 Payment Information

Shows how much you owe and when it's due.

- **Please Pay By:** The date your payment is due.
- **Amount Due:** The total amount due by the due date.
- **Enter Amount Enclosed:** Write the amount you are paying.

Subtotal Delivery Services		\$118.46
Other Charges or Credits		\$6.78

1 Account Summary

- Amount Due:** The total balance you need to pay.
- Last Payment Received:** The most recent payment credited to your account.
- Balance Forward:** Any unpaid balance carried over from the last bill.
- Current Charges/Credits:** New charges or bill credits for this billing period.
- Electric Supply Services:** The cost of the electricity supply itself.
- Delivery Services:** The cost to deliver electricity to your home or business.
- Other Charges or Credits:** Adjustments, small extra charges, or credits.
- Total Current Charges:** The sum of this billing period's charges.
- Total Amount Due:** The final amount owed by the due date.

2 Meter & Usage Information

- Meter Number:** Identifies the meter tied to your account.
- Current Read:** Your latest meter reading.
- Previous Read:** Your last meter reading.
- Current Usage:** The electricity used during this billing cycle.
- Reading Type:** Shows whether the reading is actual or estimated.
- Monthly kWh Use:** Your usage history for recent months.
- Total Demand Use:** Your peak demand usage, when applicable.

3 Supply Charges

- Generation Svc Chrg:** The cost charged by the electricity supplier for generating or supplying power.
- Subtotal Supplier Services:** The total of all supply-related charges.

4 Delivery Charges

- Customer Chrg:** A basic fixed charge for maintaining your account and service.
- Distribution Dmd Chrg:** A demand-based charge for using the local distribution system.
- Distribution Energy Chrg:** The charge for moving electricity through the local distribution network.
- Transition Energy Chrg:** An adjustment related to legacy or transition costs in the electric system.
- Transmission Dmd Chrg:** A demand-based charge for the regional high-voltage transmission system.
- Res Assist Adj Clause:** A charge that helps fund assistance programs for eligible customers.
- Pension/PBOP Adj Mech PPAM:** An adjustment related to utility pension and post-retirement benefit costs.
- Basic Svc Cost Adj:** An adjustment that reconciles basic service supply costs.
- Net metering recovery surcharge:** Helps recover net metering program costs.
- Solar Program Cost Adjustment:** Supports state solar incentive programs.
- Renewable Energy Chrg:** Supports renewable and clean energy requirements.
- Energy Efficiency:** Funds energy efficiency programs and incentives.

① Charge names and line items may vary slightly by rate, service type, or billing period.

FINANCE

Common residential solar financing options

FINANCE OPTIONS

Solar financing options

 Option	 Best for	 Customer owns system?	 How to explain it
 Cash purchase	Highest long-term return and no monthly finance payment.	Yes	Customer pays upfront and keeps system benefits, subject to eligibility.
 Solar loan	Ownership with low/no upfront cost.	Yes	Customer finances the system and typically replaces much of utility spend with a loan payment.
 PPA	Low upfront cost and payment per kWh produced.	Usually no	Customer buys solar energy produced by the system at a contract price.
 Lease	Low upfront cost with fixed monthly solar payment.	Usually no	Customer leases system access for a set monthly payment.
 Battery add-on	Backup and demand response value.	Depends	Battery can support backup circuits and may qualify for programs like ConnectedSolutions.

Rep rule

Do not sell financing before diagnosing the customer.

Ask first: "Is your priority lowest monthly payment, ownership, backup power, or long-term return?"

The right system starts with real usage

Typical expectation: 60–90 days, depending on local approvals and utility PTO.

OBJECTIONS

More objections and strong rebuttals

OBJECTIONS

More objections and strong rebuttals

Use calm, simple responses that acknowledge the concern, clarify the real issue, and keep the conversation moving toward the next step.

1. "I don't want holes in my roof."

Rebuttal: That is a valid concern. Modern racking is engineered and flashed for water protection, and roof condition is reviewed before installation is recommended.

Follow-up: Do you know the age of the roof, or is your main concern long-term leaks?

2. "My bill is already low."

Rebuttal: That may be true, and if so solar may not be the best fit. The first step is to review annual usage and see whether there is enough consumption to offset.

Follow-up: Has your usage stayed low all year, or do you have higher summer or winter months?

3. "I heard solar is a scam."

Rebuttal: Bad companies create that impression. The safest way to evaluate solar is to review the bill, design, warranties, equipment, and contract terms before making a decision.

Follow-up: Is your concern the company, the financing, or whether the savings are real?

4. "I want to wait."

Rebuttal: No problem. Waiting is your choice. The only risk is that utility rates, incentives, and install timelines can change, so it helps to understand your options now.

Follow-up: Are you waiting because of timing, uncertainty, or because you want to compare more options first?

5. "What if I need a new roof later?"

Rebuttal: That is an important question. If the roof is near the end of its life, it is better to identify that before moving forward. Roof age is part of the qualification process.

Follow-up: Do you know when the roof was last replaced or whether any work is expected soon?

6. "I don't want another payment."

Rebuttal: That makes sense. The comparison is not just solar by itself, but solar plus any remaining utility bill versus what you already pay today.

Follow-up: Is your main goal the lowest monthly payment, ownership, or long-term savings?

7. "I don't have time right now."

Rebuttal: Understood. The goal at the door is not a full presentation. It is simply to see whether it makes sense to set a quick review at a better time.

Follow-up: Would a short call or appointment later this week be easier?

8. "I need to do more research."

Rebuttal: That is completely fair. A good review should help you research with real numbers for your home instead of generic information online.

Follow-up: Would it help to first see your bill analysis and options, then compare from there?

Rep rule

Do not argue. Slow the conversation down, acknowledge the concern, ask one clarifying question, and respond simply. The goal is trust, education, and a qualified next step—not winning the debate.

Ready to see what solar could do for your home?

Nexis Power will review your bill, roof, incentives, and financing options — then show a clean path to lower, more predictable energy costs.

- 01 **Send your electric bill**
- 02 **Confirm home details**
- 03 **Review solar + battery options**
